TELE RADIO®
REMOTE CONTROL

Tele Radio develops, manufactures and markets radio control systems for industrial use. With more than 50 years of experience we have solid knowledge and experience of radio control systems.

Panther is a 2.4 GHz, widely approved remote control system. Developed for a wide range of uses. The 2.4 GHz also lets the user operate machinery at a great range, up to 500 meters line of sight.

We have developed the software in Panther to be very configurable to accomodate our customers very specific applications. By doing this we can offer a very cost effective system that provides the customer with a unique system that tailors to their needs.

Alternative transmitters

PN-T13-4

PN-T7-16

PN-T21-3

Features

- Pre-wired receiver with 4 transistor outputs
- Latching functionality on the outputs
- Digital inputs
- Programmable logical functions
- Operates at 2.4 GHz, using technology that can control up to hundreds of equipment without interference
- If the transmitter is lost or damaged, any other transmitter of the same range can be used as replacement
- IP rating: Transmitter IP67, Receiver IP65
- Continuous operation up to 150 h
- The Panther system is virtually adaptable for a wide range of applications: agricultural machinery, transportation, vehicle carriers, sea winches, etc.
- Tele Radio Export AB worldwide warranty covers material, design or manufacturing faults for a period of two years from delivery from Tele Radio Export AB.
